INTELLECTUAL PROPERTY AUDIT SYSTEM

ABSTRACT OF THE DISCLOSURE

1   An intellectual property computer-implemented
2 audit system for valuing an intellectual property
3 portfolio includes a first database storing first
4 information relating to the intellectual property
5 portfolio and a database access and collection device
6 connected to the first database and accessing the first
7 database and retrieving the first information. In
8 addition, the intellectual property audit system also
9 includes a second database storing empirical data
10 relating to known intellectual property portfolios, and
11 a comparison device connected to the database access
12 and collection device and to the second database, the
13 comparison device receiving the first information from
14 the database access and collection device and comparing
15 the first information to the empirical data retrieved
16 from the second database producing an intellectual
17 property worth indicator indicating the worth of the
18 intellectual property portfolio.
